Hard Shells

HARD SHELLS · FEATURED

Almond Shell

A durable solid fuel for greenhouses and industrial boilers, with a wide moisture tolerance, high calorific value and smokeless burning character.

Higher Heating Value (HHV)	Typical reference ~4,060–4,540 kcal/kg (biomass literature; varies by lot/source)
Lower Heating Value (LHV)	Typical reference ~3,800–4,250 kcal/kg (biomass literature; varies by lot/source)
Ash Content	Low Ash Content
Origin & Supply	Anatolia & Malatya Cracking Facilities

HARD SHELLS

Walnut Shell

One of the high calorific, clean burning members of the shell family.

Higher Heating Value (HHV)	Typical reference ~4,400–4,900 kcal/kg (biomass literature; varies by lot/source)
Lower Heating Value (LHV)	Typical reference ~4,000–4,400 kcal/kg (biomass literature; varies by lot/source)
Ash Content	Super Low Ash Content
Lignin Content	High Lignin Content

HARD SHELLS

Hazelnut Shell

A classic biomass fuel with high supply continuity in Türkiye, a calorific value close to wood and low ash.

Higher Heating Value (HHV)	Typical reference ~4,420–4,590 kcal/kg (per biomass literature; varies by lot/source)
Lower Heating Value (LHV)	Typical reference ~3,950–4,420 kcal/kg (biomass literature; varies by lot/source)
Ash Content	Low Ash Content

HARD SHELLS

Peach Stone Shell

The closest equivalent to apricot kernel shell.

Upper Calorific Value (HHV)	Typical reference ~4,600–4,900 kcal/kg (biomass literature; varies by lot/source)
Lower Calorific Value (LHV)	Typical reference ~4,250–4,600 kcal/kg (biomass literature; varies by lot/source)
Ash Content	Low Ash Content
Origin & Supply	Malatya & Integrated Facilities Across Türkiye

HARD SHELLS

Pistachio Shell

An economical biomass fuel for industrial ovens and solid fuel boilers.

Upper Calorific Value (HHV)	Typical reference ~4,550–4,800 kcal/kg (biomass literature; varies by lot/source)
Ash Content	Low Ash Content
Lower Calorific Value (LHV)	Typical reference ~4,300–4,550 kcal/kg (biomass literature; varies by lot/source)
